Next Generation Reporting for Quest

Optimize Insights is the next generation in subscription management reporting. It sits at the heart of TRG Screen's new Optimize platform and is now available for Quest – our comprehensive request management system.

Proactively manage and optimize incoming business requests and enquiries with comprehensive analytics, actionable insights and vital management reporting on service requests from across the organization.

Insights Library	**Dashboard Studio**	**Pivot Studio**	**Extend Datasets**
Curated library of visual analytics and actionable insights	Personalize BI-powered dashboards and visualizations	Manipulate raw data with drag and drop visualizations	Extract and integrate reporting datasets via web APIs

Optimize Insights turns your request, enquiry and workflow management metrics into actionable insights

Research, information, market data, operational and similar service teams benefit from visual analytics and insights that answer critical questions about your request management processes and workflows.

Requests	**Time Entries**	**Survey responses**	**Team Productivity**
Full transparency into activity, assignments, progress and results	Report (and bill) on recorded time per individual request	Insight into requestor's satisfaction with responses provided	Clear visibility into everyone's workload and progress - focus of time and energy

Are you ready to change the way you manage, analyze and report on your requests, enquiries & workflows?

Request and workflow management can be hard to get to grips with. Optimize Insights allow you to create order for research, information, market data, operational and similar service teams dealing with a high volume of enquiries and requests.
