

XMon Static Data - Market Data Spending: Under Control

Powered by

XPansion
Financial Technology Services

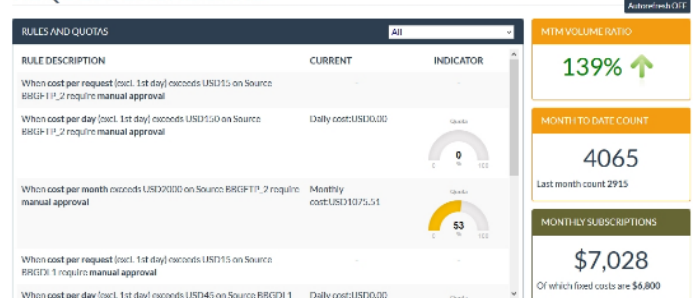

XMon Static Data allows clients to save costs on market data, reduce the time spent managing those costs and improves transparency over data spending and data flows within the enterprise.

XMon empowers financial institutions by providing them with a comprehensive understanding of market data usage and costs and improves their control over market data spending.

Real-time Monitoring

- Global view of static data downloads as they occur across the enterprise and live usage counters
- Real-time view of end user market subscriptions and fixed costs
- Global view of spending quotas and budget alerts
- Enterprise wide indicators provide consumption information at a glance

REQUEST DASHBOARD

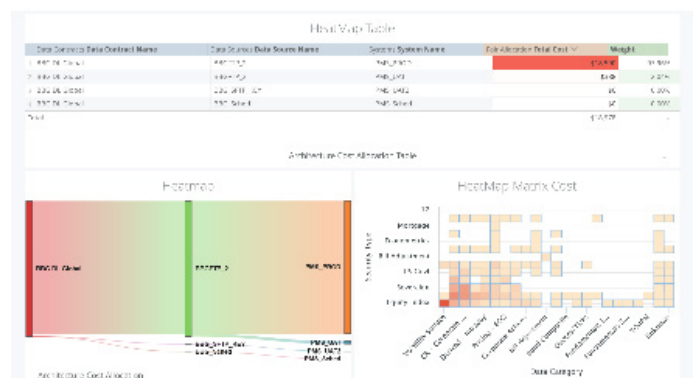

Dynamic Flow Control

- Actively control the flow of data using granular flow control rules
- Control costs of test and development systems
- Prevent erroneous downloads from occurring and incurring costs for data that is not required

In-Depth Reporting and Advanced Analytics

- Evaluate and quantify ROI for data caching and security master systems
- Generate consolidated usage reports across data vendors and internal systems and export reports in Excel and PDF formats
- Regenerate data invoices and reconcile spending
- Generate cost allocation reports for business lines, based on real system spending
- Schedule and automatically email market data usage reports to key stakeholders in the enterprise

Intelligent Simulations

- Run what-if scenarios using actual recorded past data requests
- Validate the impact of data vendor pricing changes and view the impact of business changes on the overall cost of market data

Live Alerts

- Stay in control of market data spending, be proactively notified of important alerts concerning data flows: SLA response breaches, erroneous data downloads, contract term expiries and more

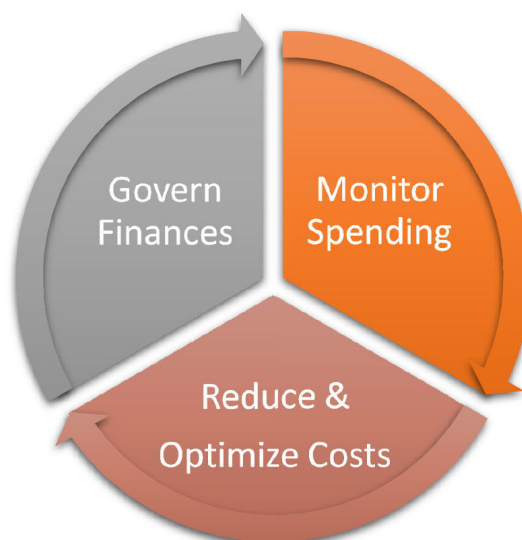

Reduced Over-spending

XMon reduces over-spending and provides evidence to help clients confidently answer the toughest questions around market data spending:

- ✓ How much are we spending on TEST environments for market data?
- ✓ How can we limit spending on DEV environments?
- ✓ How would data spending increase if we added a new business line?
- ✓ How would a vendor price list change impact our market data spending?
- ✓ How much would we save with a security master infrastructure?
- ✓ How can we provide better market data spending governance?

Visibility, control and governance

XMon adds a new dimension to market data cost management and provides unparalleled visibility, control and governance over market data spending.

Key Benefits

- Reduce costs and unnecessary data requests
- Reduce staff time spent on managing data costs
- Consolidate and report data downloads across the firm
- Understand the impact of vendor price changes and improve budgeting and forecasting

Features

- Real-time dashboard for static data downloads
- Real-time flow control via quotas and email workflow
- Flexible rule engine

- Global time series reporting
- Multi-user capable
- Multi-system capable
- Scalable, fully hosted platform

Currently Supported Data Vendors

- Data Providers
 - Bloomberg Data License (FTP,SFTP, WebAPI)
 - Reuters DataScope Select (FTP, SFTP, WebAPI)
- Integration with any static data source (internal or external)
